Education

Bachelor of Engineering, Computer Engineering (Co-op) Sept. 2024 - 2029
University of Guelph Guelph, ON

- Dean's Honour List; Entrance Scholarship recipient.
- Relevant Coursework: **Digital System Design**, **Electric Circuits**, **Data Structures**, **Computer Organization**, **Engineering Design II**.

Technical Skills

- **Programming:** C, C++, Python, MATLAB, Java, Bash
- **Architecture & Embedded:** CPU Architecture, FPGA Design, VHDL, RTL Design, FSMs, Arduino, Microcontrollers, Timers, Interrupts
- **Verification & Tools:** Verification & Testbenches, Hardware Debugging, Vivado, ModelSim, Linux, Git/GitHub, SolidWorks

Projects

16-bit CPU Architecture in VHDL Jan. 2026 - Apr. 2026
Computer Architecture Team Project Guelph, ON

- Designed and implemented a functional **16-bit CPU architecture** in **VHDL**, integrating components including a **16-bit ALU**, instruction memory, data memory, program counter, and datapath control logic.
- Developed support for **ADD, SUB, LOAD/STORE, BNE, and JUMP** instructions by implementing control logic, memory interfacing, and datapath components including a **3-to-1 multiplexer**.
- Verified instruction fetch, decode, and execution behavior through **simulation waveforms**, hardware debugging, and custom **VHDL testbenches** in a collaborative three-member engineering project.

Windows Optimizer Dec. 2025 - Jan. 2026
Personal Software Project

- Designed and developed a modular Python-based system utility to standardize Windows configurations and reduce manual operational effort across environments.
- Interfaced with Windows Registry and system APIs using **winreg, ctypes, and subprocess** to control startup services, process priorities, and configuration states.
- Standardized configuration workflows and reduced manual setup steps by automating registry and service-level adjustments, improving repeatability across Windows environments.

Arduino-Based Vehicle Sept. 2024 - Dec. 2024
Team-Based Embedded Systems Project

- Developed embedded C++ control logic for an autonomous vehicle using sensor integration, timers, and interrupt-driven inputs for responsive real-time behavior.
- Performed hardware debugging and system testing to diagnose logic faults and improve operational reliability.
- Achieved **3rd place in accuracy performance** in a competitive Arduino vehicle evaluation against peer teams.

Experience

Desktop Support Analyst (Co-op) May 2026 - Aug. 2026
S&C Electric Canada Ltd. Etobicoke, ON

- Provided **enterprise desktop support** by troubleshooting hardware, software, Windows, network, **printer**, and other on-site machine issues, while managing incidents and service requests through **ServiceNow**.
- Supported **device deployment and configuration** for laptops, tablets, monitors, phones, and peripherals, including the **Windows Autopilot process**, device setup, hardware reclamation, and asset lifecycle management.
- Demonstrated strong **communication, problem-solving, and collaboration** by supporting end users and working with IT team members to resolve technical issues.

Certifications

IBM Artificial Intelligence Fundamentals (Oct. 2025); **IoT and Embedded Systems** (Dec. 2025); **Certified SOLIDWORKS Design Associate (CSWA)** (Mar. 2026)
